Cyberwar: The Next Round of the Arms Race

- War in and through space can take many forms. The Pentagon's Cyber Warfare program gives the U.S. the ability to shut down a competitor's satellites, air defense system, or even their economy. Cyber war technology is spreading like a virus. The National Security Agency now shares headquarters with Cyber Command.
- The U.S. continues to surround Russia and China with land-based and sea-based 'missile defense' systems that are key elements in Pentagon first-strike attack planning. Russia and China have responded by modernizing their nuclear forces and negotiations for reduction and elimination of nuclear weapons are frozen due to destabilizing U.S. deployments.
- Anti-Satellite (ASAT) testing continues by the major space powers creating even more danger of war in space that would result in more dangerous space debris.
- Help us **Keep Space for Peace** by organizing a local action during the international week of education and action!

International Week of Protest to | **October 3-10**
Stop the Militarization of Space | **2015**
